TJKM Fee:

\$50K

PROJECT DESCRIPTION:

TJKM currently serves as the only on-call traffic engineering consultant to the City of San Bruno.

As a part of the contact, TJKM has completed several traffic engineering related assignments. Some of the projects completed under this contract are:

- Engineering and Traffic Surveys
- Susan Drive Site Distance Evaluation
- San Mateo Avenue Pedestrian Safety Enhancements
- San Bruno Avenue and Second Avenue Intersection Safety Analysis

A majority of these task orders were completed within four to eight weeks of TJKM receiving the Notice to Proceed, and after providing a detailed scope and budget. After completing a thorough field investigation and collecting necessary data, TJKM engineers analyzed the issues and made necessary recommendations to resolve these concerns and improve safety.

In 2016 TJKM was retained, under a separate contract, to assist with developing San Bruno's first Transportation Impact Fee (TIF). Development of the TIF provides the City with an opportunity to refine its funding strategy for multimodal improvements identified in the General Plan, Walk & Bike Plan, and Downtown and Transit Corridors Plan.

VISION THAT MOVES YOUR COMMUNITY
